

The VERAS Export to Banner process should set up the billing event in FRAEVGA, but since the Financial Unit has the most training in the billing process, the event setup should be reviewed against the award document by the financial specialist to ensure the correct setup has been selected and any additional internal notes to help with processing added.

There are three general types of billing event setups depending on the invoicing terms. How each type is processed in Banner is in this workbook under Invoicing Procedures-FRRBILL/Banner Invoice Process:

1. Cost Reimbursement means that the University first incurs the costs and then submits an invoice to the sponsor for those costs. Standard invoices have a billing event type of BILL and are most typically invoiced either monthly (MBIL/SPCM format) or quarterly (QBIL/SPCQ format). SF270 (federal payment request) invoices have an event type of MBEV (monthly billing event) or QBEV (quarterly billing event) and a format of 270B.
2. Letter of Credit is a specific type of cost reimbursement whereby the University first incurs the costs and then requests payment via an electronic drawdown system. These accounts are billed with each payroll and have both a billing event and a format of LOC.
3. Fixed payments are instances where the sponsor has requested that specific amounts be requested or invoiced at specific times. In such cases the University may have actually expensed either more or less than the funds we have received from the sponsor at any time. These accounts are set up with an event type of LS% (e.g. LSAB, LSBC) and a format of UIBL.

Additionally, the unit currently sets up other events in FRAEVGA for any required reporting, as well as the due date for final close. More information is under the "Other reporting" page.

All events are set up in the Banner screen FRAEVGA and the general process is below. Specific setups are in the associated page for the event setup:

- You can access the screen from the Options menu under the FRAGRNT billing tab, or directly from the Banner home screen by typing the screen name in the search field.
- Once in the screen you can access either a single grant code, or else multiple grant codes under a PMS code. Type in the grant code and hit Go.
- The Event Code is what is used when running the event report (FRREVNG) or using the event screen (FRIEVNG) as detailed in the Reporting section.
 - BILL/MBEV/QBEV - Cost reimbursable billing events
 - FFR – Financial reports (federal and other)
 - LS% - All lump sum invoices due
 - FIN – Finals due (set up for 30 days prior to actual final)
 - PROP – Property reporting due
 - PAT – Patent reporting due
 - ACUC – Animal Care and Use protocol expiration (should be moving to VERAS)
 - HAC – Human Subjects (IRB) protocol expiration (" ")
 - BIOH – Biosafety protocol expiration (" ")
- Alternate Description is where we put information that is helpful for when you are viewing in Banner or running the event report. An example is putting the drop-dead date for final invoicing.
- Number of Days fields – We don't use these because we couldn't get them to work as needed, but we might want to revisit in the future.
- Date From/Date To fields – These are only used when setting up a recurring event and otherwise should be left blank. Banner will automatically assume the start date/end date of the award for these fields. If you need to complete, for example, a final FFR 90 days after the end date you will want to extend the Date To field so that it captures the final date needed.
- Begin Date – Ignore
- Frequency - Similarly to Date From/To this is only used when we want to set up multiple dates for the event, such as quarterly FFRs. Note that sometimes you have to set up more events than you need because Banner only has certain selections. Scheduled dates can be revised in the due date section.
- Payment Method - For billing only. Cost reimbursable for all non-scheduled payment types (fixed amount, lump-sum). If Fixed you will probably also have a Date From/To and Frequency.
- Period To - Only if using dates and frequencies. This is the date Banner will start from when setting up multiple dates. For example, if you are setting up periodic reporting, you would want this to be the date the first report is due. Note that we use the date the report is run through not the actual date due for this purpose (for example, a quarterly FFR that is being reported for 12/31/2020 would be set up as that date rather than the actual due date, which is 30 days later).
- Bill Format - This drives the selection in the FRRBILL process.
- Default Responsible User ID - Usually the person entering the data.
- Default Proxy User ID – Not currently used
- Default Fixed Schedule - This is used when we know that each payment request will be for the same amount and is an alternative to setting up the payment events individually.

Once the above fields are complete and saved you still need to make sure that there is at least one actual event due date in the section below or the system will not know how to report or bill.

The system only allows for one billing event code, but can have multiple event dates set up.
